/dev stage="3-years-old poplar trees grown in the nursery"
/clone_llb="poplar cNNA library from young tension xylem"
/note="A cDNA library was made with mRNA isolated from tension wood tissues corresponding to the differentiating xylem collected with a scalpel after debarking the stem.
The sampling was done on 3 different tilted trees grown in the nursery. cDNAs were cloned in an oriented way into SfiI (A and B) restriction sites. A one-step conversion of Lambda TriplExz to the corresponding pTriplExz plasmid was done via site-specific recombination at loxP sites
(Clontech ; SMART cDNA library construction kit). cDNA inserts were PCR amplified using flanking primers and then sequenced on a ABI3100 Genetic Analyser (Applied
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /mol_type="mRNA"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   12445392
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (UMIST)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /clone_lib="CSEQCHN38" /clone_lib="CSEQCHN38" /clone="Toygan: limbs; Vector: pBluescript II KS(+); Site_1: /note="Toygan: limbs; Vector: pBluescript II KS(+); Site_1: fcorI; Site_2: Note: This normalized library was constructed from 1 million independent clones: cDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand synthesis reaction. Following this first strand reaction, double-stranded cDNA was blunted, ligated to NotI adapters, digested with EcoRI size-selected, and cloned into the NotI and EcoRI compatible sites of a custom modified MCS of the pBluescript (KS+) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridization was used."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note="Vector: pCRII-TOPO (Invitrogen); Site_1: EcoRI; Site_2: EcoRI; The library was constructed by Claire Murphy and Dr. James McCarter at Washington University, St. Louis. Oligo(dT)-SLI PCR based library. cDNA PCR products of size >400 nucleotides containing SLI on the 5' end and oligo(dT) on the 3' end were non-directionally cloned into pCRII-TOPO(Invitrogen) following the Topo TA cloning protocol. RNA was provided by Andrew Kloek of Divergence, Inc., St. Louis, MO."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /organism="Pratylenchus penetrans"

Oligo(GT)-SLI PCR based library. cDNA pCR products of size >400 nucleotides containing SLI on the 5' end and oligo(GT) on the 3' end were non-directionally cloned into pCRII-TOPO(Invitrogen) following the Topo TA cloning protocol. RNA was provided by Andrew Kloek of Divergence, Inc., St. Louis, MO."
